

Topcalf First Care Calving Box

Available in XL version

The Topcalf First Care Calving Box provides newborn calves with a clean and hygienic start immediately after birth. Thanks to the partially removable side wall, the cow can lick her calf dry, while the calf has minimal contact with pathogens from the calving area. After this initial phase, the same mobile box can easily be used as an individual calf box, with a strong focus on animal health, hygiene and ease of use.
